

ZHAGARAM EXIM LLP

Modern Export & Import Website — Senior Developer Implementation Prompt

Reference / Design Inspiration: <https://www.ksquarefs.com/>

ZHAGARAM EXIM LLP — Modern Export & Import Website

ROLE

Act as a **Senior Full-Stack Frontend Architect, UI/UX Designer and Next.js Developer**.

Build a complete, production-ready website for:

ZHAGARAM EXIM LLP

Tagline:

From Indian Roots to Global Routes

Reference website / design inspiration:

<https://www.ksquarefs.com/>

The reference website should be used to understand the expected website structure, navigation patterns, section composition, spacing, CTA placement and overall professional business presentation.

However, the actual business content and requirements **MUST** come from the provided ZHAGARAM EXIM LLP requirements document.

Do NOT replace ZHAGARAM EXIM LLP content with K Square FS content.

1. BUSINESS INFORMATION

Company:

ZHAGARAM EXIM LLP

Business type:

India-based Export and Import company

Business focus:

- Agricultural products
- Food products
- International sourcing

- Trading
- International supply
- Export

The company sources products from:

- Reliable farmers
- Manufacturers
- Trusted suppliers

The business focuses on:

- Quality
- Competitive pricing
- Proper packaging
- Timely supply
- Reliability
- Transparency
- Long-term partnerships

The company aims to connect quality Indian agricultural products with international markets.

These business requirements are directly from the supplied requirements document.

2. CORE TECHNOLOGY

Use:

- Next.js
- App Router
- TypeScript
- Tailwind CSS
- React
- Lucide React
- next/image
- next/font

Use strict TypeScript.

Do NOT use:

- JavaScript
- Bootstrap
- Material UI

- unnecessary UI frameworks
- duplicated data
- giant page components

3. PROJECT ARCHITECTURE

Create a scalable structure:

zhagaram-exim/

■

■■■■ app/

■ ■■■■ layout.tsx

■ ■■■■ page.tsx

4. CRITICAL ARCHITECTURE RULE

Separate everything.

Use this architecture:

Types

↓

Data

↓

Utilities

↓

Reusable Components

↓

Page Sections

↓

Routes

Business data MUST NOT be directly hardcoded inside JSX.

For example, NEVER:

```
<h3>Spices</h3>
```

```
<p>We export quality spices...</p>
```

Instead:

```
const products = [  
  {  
    id: "spices",  
    slug: "spices",  
    title: "Spices",  
    description: "...",  
  },  
];
```

Then:

```
<ProductCard product={product} />
```

5. TYPE DEFINITIONS

Create proper TypeScript types.

Product

```
export interface Product {  
  id: string;  
  slug: string;  
  title: string;  
  shortDescription: string;  
  description?: string;  
  image: string;  
  icon?: string;
```

```
features?: string[];  
}
```

Navigation

```
export interface NavItem {  
  label: string;  
  href: string;  
  children?: NavItem[];  
}
```

Process Step

```
export interface ProcessStep {  
  id: number;  
  title: string;  
  description?: string;  
}
```

Testimonial

```
export interface Testimonial {  
  id: string;  
  name: string;  
  role?: string;  
  content: string;  
  rating?: number;  
  image?: string;  
}
```

FAQ

```
export interface FAQ {  
  id: string;  
  question: string;  
  answer: string;  
}
```

6. SITE DATA

Create:

/data/site.ts

Example:

```
export const siteConfig = {  
  name: "ZHAGARAM EXIM LLP",  
  tagline: "From Indian Roots to Global Routes",  
  description:  
    "India-based export and import company supplying quality agricultural and food products to international markets.",  
};
```

Do not repeat the company name throughout components.

7. PRODUCT DATA

The requirements document specifies these product categories:

1. Spices
2. Edible Oils
3. Nuts
4. Pulses
5. Rice
6. Other Products

These categories must be stored in:

/data/products.ts

The requirements document explicitly lists these categories.

Example:

```
export const products: Product[] = [  
  {  
    id: "spices",  
    slug: "spices",  
    title: "Spices",  
    shortDescription: "...",  
    image: "/images/products/spices.webp",  
  },  
  {  
    id: "edible-oils",  
    slug: "edible-oils",
```

```

        title: "Edible Oils",
        shortDescription: "...",
        image: "/images/products/edible-oils.webp",
    },
    {
        id: "nuts",
        slug: "nuts",
        title: "Nuts",
        shortDescription: "...",
        image: "/images/products/nuts.webp",
    },
    {
        id: "pulses",
        slug: "pulses",
        title: "Pulses",
        shortDescription: "...",
        image: "/images/products/pulses.webp",
    },
    {
        id: "rice",
        slug: "rice",
        title: "Rice",
        shortDescription: "...",
        image: "/images/products/rice.webp",
    },
    {
        id: "other-products",
        slug: "other-products",
        title: "Other Products",
        shortDescription: "...",
        image: "/images/products/other-products.webp",
    },
];

```

Do not invent specific products under each category unless verified business data is available.

8. HOMEPAGE

Build the homepage with the following business flow.

Section 1 — Hero

Display:

ZHAGARAM EXIM LLP

From Indian Roots to Global Routes

Supporting messaging should communicate:

- Indian agricultural products
- global supply
- sourcing
- quality
- reliable international delivery

Primary CTA:

Get a Quote

The supplied requirements specifically identify **Get a Quote** as a primary CTA.

Secondary CTA:

Explore Products

Use a premium agricultural/export visual.

9. ABOUT SECTION

Use the actual company description from the requirements document.

Core messaging:

ZHAGARAM EXIM LLP is an India-based Export and Import company involved in sourcing, trading and international supply of quality agricultural and food products.

Products are sourced from:

- reliable farmers
- manufacturers
- suppliers

Business priorities:

- quality
- competitive pricing
- proper packaging
- timely supply
- reliability

- transparency
- long-term partnerships

The full source description is provided in the requirements PDF.

Create a modern split layout:

Image / Agricultural Visual

+

Company Story

+

Learn More CTA

10. PRODUCTS SECTION

Create:

Our Products

Display six categories:

Spices

Edible Oils

Nuts

Pulses

Rice

Other Products

Each card should contain:

- image
- category name
- short description
- View More

The source requirements explicitly specify **View More** for product categories.

Use:

```
<ProductCard product={product} />
```

not duplicated markup.

11. PRODUCTS PAGE

Route:

/products

Create:

- Hero
- Intro
- Product grid
- CTA

The grid must be data-driven.

12. INDIVIDUAL PRODUCT PAGE

Route:

/products/[slug]

Generate pages dynamically.

Example:

/products/spices

/products/edible-oils

/products/nuts

/products/pulses

/products/rice

/products/other-products

Use:

`generateStaticParams()`

Product page should contain:

Breadcrumb

Product Hero

Product Description

Quality / Supply Information

Packaging Information if verified

Related Products

Get a Quote CTA

Do not invent product specifications.

13. WHY CHOOSE US

Create a dedicated section:

Why Choose Us?

The requirements document explains that the company focuses on:

- quality Indian agricultural products
- reliable and well-managed supply chain
- quality selection
- grading
- packaging
- documentation
- logistics
- consistency
- dependable service

Use these actual concepts to create the UI.

Recommended visual structure:

Quality

Reliable Sourcing

Systematic Process

Proper Packaging

Documentation

Global Logistics

Do not create unsupported claims such as certifications or guaranteed delivery timelines.

14. SUPPLY & EXPORT ROUTE

This is one of the most important sections.

Create:

Our Supply & Export Route

The exact process from the requirements document is:

This process must be represented accurately.

15. SUPPLY ROUTE UI

Do NOT show this as a boring plain vertical list.

Create a premium visual timeline.

Desktop:

SOURCE

PROCURE

CHECK

GRADE

↓

PROCESS

↓

PACKAGE

↓

STORE

↓

DOCUMENT

↓

LOGISTICS

↓

FREIGHT

↓

SHIP

↓

GLOBAL CUSTOMER

Mobile:

Use a vertical timeline.

Each step should have:

- number
- icon
- title
- short explanation

Data must come from:

/data/supply-route.ts

16. VISION

Create a dedicated Vision section.

Use the actual requirement:

To become a trusted global trading partner by connecting high-quality Indian agricultural products with international markets through reliable sourcing, consistent quality, and responsible business practices.

Do not rewrite the meaning.

The source wording is in the supplied document.

Design:

Large statement

+

Global map / agriculture visual

+

subtle animated route line

Keep animation subtle.

17. MISSION

Create Mission section.

Use the requirements:

To source quality products from trusted farmers, manufacturers, and suppliers, ensure proper handling and packaging, and deliver them efficiently to customers worldwide while building long-term relationships based on quality, transparency, and timely service.

Source: requirements document.

Use a premium split layout.

18. VISION + MISSION

You may combine Vision and Mission into a single section:

Our Vision

Our Mission

But keep them visually distinct.

Do not turn them into generic corporate cards.

Use strong editorial typography.

19. TESTIMONIALS

The requirements document contains:

Testimonials

Therefore create:

/data/testimonials.ts

/components/home/Testimonials.tsx

However:

IMPORTANT:

Do NOT invent customer names, companies, ratings or testimonials.

If actual testimonial content is not supplied, create an empty data structure and a polished UI placeholder that can later receive verified testimonials.

Example:

```
export const testimonials: Testimonial[] = [];
```

The section should gracefully handle empty data.

20. FAQ

The requirements document includes:

FAQ

Create:

/data/faq.ts

/app/faq/page.tsx

/components/home/FAQPreview.tsx

Use an accessible accordion.

Do not invent legal, compliance or product claims.

If questions are not supplied, create the structure and mark the content for business verification.

21. GET A QUOTE

Create a strong conversion section.

CTA:

Get a Quote

Route:

/contact

or:

/get-a-quote

Preferred:

/get-a-quote

if implementing a dedicated quotation flow.

Form:

Name

Company Name

Email

Phone

Country

Product

Quantity

Message

IMPORTANT:

Do not pretend that the form sends email unless backend integration is implemented.

Build:

UI

Validation

Submission abstraction

so API integration can be added later.

22. CONTACT PAGE

Create:

/contact

Include:

- company introduction

- contact information placeholders if not provided
- enquiry form
- quote CTA
- map section only if verified location exists

Do not invent:

- phone number
- email
- address
- WhatsApp number
- office location

23. HEADER

Create premium global header.

Desktop:

Logo

Home

About

Products

Export Process

FAQ

Contact

Get a Quote

Mobile:

Logo

Menu

Mobile menu must be smooth and accessible.

Use the same navigation source:

/data/navigation.ts

24. FOOTER

Footer should include:

ZHAGARAM EXIM LLP

From Indian Roots to Global Routes

Links:

Home

About

Products

Export Process

FAQ

Contact

Privacy Policy

Terms & Conditions

Only display social media links if verified.

25. DESIGN DIRECTION

The design should feel like:

Premium

International

Agricultural

Trustworthy

Modern

Professional

Export-oriented

Clean

Corporate

Avoid:

cheap template look

excessive gradients

over-rounded cards

excessive glassmorphism

neon colors

too many animations

stock-template appearance

26. COLOR SYSTEM

Create a centralized design system.

Recommended visual direction:

- Deep green / agricultural green
- Warm off-white
- Earth tones
- Dark charcoal
- Controlled gold/amber accent

Do not use too many colors.

All colors must be defined centrally.

Example:

```
:root {  
  --background: ...;  
  --foreground: ...;  
  --primary: ...;  
  --primary-dark: ...;  
  --secondary: ...;  
  --accent: ...;  
  --muted: ...;  
  --border: ...;  
}
```

27. TYPOGRAPHY

Use `next/font`.

Recommended:

Manrope

Inter

Plus Jakarta Sans

Choose one primary font system.

Use strong editorial typography for:

- Hero
- Vision
- Mission
- Section headings

28. IMAGE DIRECTION

Use professional imagery representing:

- Indian agriculture
- spices
- rice
- pulses
- edible oils
- nuts
- farmers
- packaging
- logistics
- shipping containers
- ports
- international trade

But do not claim that stock imagery represents actual company facilities.

Use local assets:

/public/images/

Use:

next/image

everywhere possible.

29. SEO

Implement complete SEO.

Global metadata:

ZHAGARAM EXIM LLP

From Indian Roots to Global Routes

Implement:

/app/sitemap.ts

/app/robots.ts

Dynamic product metadata:

generateMetadata()

Add structured data where appropriate:

Organization

Product

BreadcrumbList

FAQPage

Do not add fake:

ratings

reviews

certifications

aggregateRating

30. RESPONSIVE DESIGN

Must support:

320px

375px

390px

430px

768px

1024px

1280px

1440px

1920px

Check:

- no horizontal overflow

- responsive typography
- responsive images
- responsive navigation
- responsive timeline
- responsive cards
- responsive forms

31. ACCESSIBILITY

Implement:

- semantic HTML
- keyboard navigation
- focus states
- proper heading hierarchy
- alt text
- accessible forms
- aria labels
- accessible accordion
- accessible mobile navigation

32. PERFORMANCE

Use Server Components by default.

Client Components only for:

- mobile menu
- accordion
- interactive form
- animation
- carousel

Do NOT put:

"use client";

on every page.

Optimize:

- images
- fonts
- JavaScript
- animations
- layout shifts

33. DATA FILES

The following must be separate:

```
/data/site.ts
/data/navigation.ts
/data/products.ts
/data/supply-route.ts
/data/testimonials.ts
/data/faq.ts
/data/values.ts
/data/footer.ts
```

Never put these datasets inside components.

34. UTILITY FILES

Create:

```
/lib/utils.ts
/lib/seo.ts
/lib/metadata.ts
/lib/constants.ts
```

Example:

```
export function cn(...inputs: ClassValue[]) {
  return twMerge(clsx(inputs));
}
```

35. ROUTE STRUCTURE

Implement:

```
/
/about
/products
/products/[slug]
/export-process
/contact
/faq
/privacy-policy
/terms-and-conditions
/not-found
```

36. PAGE COMPOSITION

Homepage must look like:

```
export default function HomePage() {
  return (
    <>
      <Hero />
      <AboutPreview />
      <ProductCategories />
      <WhyChooseUs />
      <SupplyRoutePreview />
      <VisionMission />
      <Testimonials />
      <FAQPreview />
      <CTASection />
    </>
  );
}
```

The page itself should remain clean.

37. NO FAKE INFORMATION

This rule is mandatory.

Never invent:

- certifications

- licenses
- export volumes
- countries served
- years of experience
- customer count
- revenue
- warehouses
- factories
- offices
- awards
- testimonials
- reviews
- phone numbers
- email addresses
- addresses
- company registration details

Only use information supplied in the requirements or verified business content.

38. REFERENCE WEBSITE RULE

Use:

<https://www.ksquarefs.com>

as the UI/UX reference.

Analyze:

- header behavior
- navigation
- section rhythm
- CTA hierarchy
- card layouts
- spacing
- responsive behavior
- footer structure
- visual hierarchy

But:

DO NOT COPY K Square FS business content.

The business must remain:

ZHAGARAM EXIM LLP

The supplied PDF is the source of truth for business requirements.

39. MODERN UI IMPROVEMENT

The final website should not look like a direct old-site clone.

Modernize:

Hero

Use:

large typography

strong image

clear CTA

subtle motion

Product Cards

Use:

large image

clean typography

hover interaction

View More

Supply Route

Use:

interactive timeline

step numbers

icons

connecting line

Vision

Use:

large statement

global visual

Mission

Use:

editorial split layout

CTA

Use:

strong contrast

short copy

Get a Quote

40. FINAL DEVELOPMENT PROCESS

Follow this exact workflow.

STEP 1

Analyze reference website.

STEP 2

Analyze supplied ZHAGARAM EXIM LLP requirements.

STEP 3

Create information architecture.

STEP 4

Create TypeScript interfaces.

STEP 5

Create all data files.

STEP 6

Create global design system.

STEP 7

Build Header + Footer.

STEP 8

Build Homepage.

STEP 9

Build Products.

STEP 10

Build dynamic Product pages.

STEP 11

Build Export Process.

STEP 12

Build About.

STEP 13

Build Contact / Quote.

STEP 14

Build FAQ.

STEP 15

Build SEO.

STEP 16

Test responsive layouts.

STEP 17

Run:

```
npm run lint
```

```
npm run build
```

Fix all errors.

41. FINAL QUALITY STANDARD

The final website must be:

Production Ready

Responsive

Accessible

SEO Ready

Type Safe

Data Driven

Component Driven

Maintainable

Scalable

Fast

Modern

Premium

Most importantly:

BUSINESS DATA

↓

TYPES

↓

DATA

↓

COMPONENTS

↓

SECTIONS

↓

PAGES

↓

ROUTES

Do not mix these responsibilities.

The result should be a modern international agricultural export/import website for **ZHAGARAM EXIM LLP**, preserving the exact business requirements from the supplied document while using the referenced website only as a structural/UI inspiration.
